Maintenance and repair

How often does it need an overhaul?

How often does it need an overhaul?

It all depends on the application and operating conditions. For us what matters is the close proximity to your production plant and availability of our skilled technicians or authorized service partners. That's why we can arrange a pre-schedule overhaul or a short notice inspection.

AxFlow offers complete maintenance and repair service on any pump brand or type, either on site or at our service facility. This can also be performed by our authorised service partners. Our repair service includes collection from your site. The pump is disassembled or fibre scope inspected, and the cause of the failure is determined. All clearances and tolerances are checked at assembly. All components are inspected for proper fit and smooth operation. Service on sensitive hygienic pumps is conducted in a separate hygienic service area.

Pumps are inspected and tested before shipping. When shipped, all open nozzles are covered with shipping covers to protect your pump against inclement weather, foreign objects or tampering.

Our complete portfolio of services includes:

Overhaul and replacement of worn parts

Inspection and diagnosis. We arrange collection of your pump and do a complete overhaul and prepare a full service report detailing the overall pump condition. You will receive recommended repairs and a diagnostics report with pictures and analysis of reason to failure with a new pump solution as an alternative.

You can also utilize the planned maintenance to optimize performance and minimize risk of unexpected stoppage. Stock spare parts supply within 48 hours.

Exchange/replacement product as a back up

If your pump is out of service - we have a backup pump to offer. We can minimize your downtime while ensuring quality repair and replacement of your pump. A new pump is sent to your facility while the old pump is dismantled for assessment of needed repairs. The replacement pump is mounted in your production line.

Rent a pump – We can also provide you with a rental pump if needed, as a back-up or trial before purchase.

Workshop repairs - Alternately we can service your equipment offshore or insitu at your own facility. We keep spares on shelf and can also supply mechanical sealing solutions.

Refurbishment

When the failure report and quotation with recommendations are accepted by you we refurbish the pump. The pump is cleaned, stripped and fully repaired. Then it's painted according to your requirements and tested before delivered to your site. Documentation and Warranty are part of the package.
