

NASH Service Centers for Liquid Ring Vacuum Pumps & Compressors

**Some Companies Offer Service...Nash Specializes in Service
Our service organization is ready to provide support - keeping your
process running smoothly, efficiently and without excessive downtime.**

Service Center Capabilities

Inspection

Pumps are disassembled or fiberscope inspected, and the cause of failure is determined. This enables Gardner Denver Nash to provide you with information as to why the pump failed, to take corrective action and to determine the best type of repair for your particular application in order to extend pump life. A firm quote for repair is prepared and sent to you. Options quoting can also be made, and you determine the method of repair.

Materials

All new, remanufactured and repaired parts meet current specifications. As improvements are made to a particular part for better pump performance, your pump will be upgraded automatically. All stainless materials used in the lining of parts is "L" grade only, 304L or 316L as specified. New components - when required - are original Gardner Denver Nash castings.

Bearings, Gaskets, Packing, Seals, Piping

New bearings, gaskets, packing, seals and piping are always supplied on every Nash repair.

Tolerances

Gardner Denver Nash has the current manufacturer's drawings and dimensions. All tolerances are set to these current specifications based on Gardner Denver Nash pump drawings. Only Nash has the current OEM drawings and specifications.

Assembly

All clearances and tolerances are checked at assembly. All components are inspected for proper fit and smooth operation.

Painting

All pumps are primed and painted the same as new Nash pumps. Pumps can be painted to your particular specifications with regard to color and material.

Final Inspection

Pumps are inspected prior to shipping on each order. When shipping, all open nozzles are covered with shipping covers to protect your pump against inclement weather, foreign objects and/or tampering.

Pump Swap Out Program

With the Gardner Denver Nash swap out program, you can minimize downtime while insuring quality repair and replacement of your pumps. We can offer you a fixed price for replacement or this price can be determined after a replacement pump is sent to your facility and your old pump is down for assessment of needed repairs. Replacement pumps will be pre-assembled to your needs: rotation, material of construction, double or single extended shafts, and many more options.
